

ABSTRACT OF DISCLOSURE

A composite cured product body is provided, which includes a first cured product part formed from a condensation reaction curable silicone rubber, and a second cured product part adhering to a surface of said first cured part formed from an addition reaction curable organopolysiloxane composition. The addition reaction curable organopolysiloxane composition includes:

- (A) an organopolysiloxane with at least 2 alkenyl groups bonded to silicon atoms,
- (B) an organohydrogenpolysiloxane with at least 2 hydrogen atoms bonded to silicon atoms,
- (C) a hydrosilylation reaction catalyst, and
- (D) at least one organopolysiloxane with at least one monovalent group bonded to a silicon atom and represented by the formula (1):

or the formula (2):
